We have utilized the problem-solution format. Some chapters are collections of problems having a common topic, while others are devoted to one specific algorithm (e.g., chapter 16 covers LR(1)-parsing). The chapters are more or less independent, but the concluding chapters are more difficult. Chapters 1-7 cover material usually

The purpose of this textbook, primarily aimed at first-year undergraduates in Programming, is, firstly, to teach students how to write a correct program, together with the proof of its correctness; and secondly, to show several basic methods of constructing effective algorithms. A well-structured problem/solution format is used, and the theory is ...

Algorithms are a series of steps used to solve a problem, and you shouldn't confuse them with other entities, such as equations. An algorithm is never a solution in search of a problem. No one would create a series of steps to solve a problem that doesn't yet exist (or may never exist).

We took a specific problem we wanted to solve, taking images and applying the green screen technique to them. And worked through step-by-step how to go from that problem statement to a working piece of code. Now, what we're going to do in this lesson is we're going to take a closer look at solving programming problems.
