Big Data in Practice - Bernard Marr

Big Data can easily get out of control and become a monster that consumes you, instead of the other way around. Here are some Big Data best practices to avoid that mess. Big Data has the potential to offer remarkable insight, or completely overwhelm you. The choice is yours, based on the decisions you make before one bit of data is ever collected. The chief problem is that Big Data is a technology solution, collected by technology professionals, but the best practices are business processes.

Top 8 Big Data Best practices - Datamation

In their landmark 2015 article, Brennan and Bakken aptly stated, "Nursing needs big data and big data needs nursing." The authors noted that big data arises out of scholarly inquiry, which can occur through everyday observations using tools such as computer watches with physical fitness programs, cardiac devices like ECGs, and Twitter and Facebook accounts. When the information in these devices and programs are mined, it can be analyzed to help create new knowledge and improve patient care.

Companies that use data selectively, analyze them wisely and apply them to improve their decision making, will gain a competitive advantage over those that don't. Big data affects almost every industry and every job. Almost everything you do at work and much of what you do at home – web surfing, social media activity, watching TV, playing online games, and sending emails and texts – now produces data that multiple organizations collect, analyze and act on for their profit.
