This week in the New Yorker, Elizabeth Kolbert tells us that up until modern times, there have been five big mass extinctions of life on Earth. Most biologists now agree that we are in the midst of the sixth big mass extinction, one caused by humans. Currently, a third of all amphibian species, nearly a third of all reef-building corals, a quarter of all mammals, and an eighth of all birds are ...

Introduction to the History of Life []. It is very interesting that life began from simple chemical molecules. Starting from the formation of the universe from simple elements such as hydrogen and helium 13.7 billion years ago, until now, with Homo sapiens evolving and trying to expand its colony to a new planet, there is one great history of life. To understand those sequences in ...
