For example, say you had a call option with a current price of \$4 and a Theta of -0.10 and you wanted to predict the price in five days. A Theta of -0.10 means that every day the option will experience a price drop of \$0.10. So after five days, the price of the option should fall to \$3.50, all else being equal.

Theta is expressed as a negative number in terms of dollars. As each day ticks by the option's price will drop by the Theta. For example, you have a The Option Prophet (sym: TOP) long call at a price of \$5.50 and a Theta of -0.35. The next day our long call would be worth \$5.15 and the day after \$4.80.

The Complete Guide On Option Theta - The Option Prophet

An option provides the holder with the right to buy or sell a specified quantity of an underlying asset at a fixed price (called a strike price or an exercise price) at or before the expiration date of the option. Since it is a right and not an obligation, the holder can choose not to exercise the right and allow the option to expire.
