For a non-zero complex number z we denote by $\arg(z)$ the set of its argu-ments, i.e. the set of real numbers θ such that $z = r(\cos\theta + i\sin\theta)$. The pair of numbers (r, θ) for $\theta \in \arg(z)$ are also called polar coordinates for the complex number z . More about this will be discussed in Section 5. Every complex number $z = x + iy$ with $x, y \in \mathbb{R}$ has a complex ...

Complex analysis is a basic tool with a great many practical applications to the solution of physical problems. It revolves around complex analytic functions—functions that have a complex derivative. Unlike calculus using real variables, the mere existence of a complex derivative has strong implications for the properties of the function.
