In a cooling system of this type there is a continual slight loss of coolant if the engine runs very hot. The system needs topping up from time to time. Later cars have a sealed system in which any overflow goes into an expansion tank, from which it is sucked back into the engine when the remaining

## **How Engine Cooling System Works - YouTube**

The engine in your car runs best at a fairly high temperature.

When the engine is cold, components wear out faster, and the engine is less efficient and emits more pollution. So another important job of the cooling system is to
