Engine J85-GE-21 Maintenance - Picturpark

The General Electric J85 is a small single-shaft turbojet engine. Military versions produce up to 2,950 lb f (13.1 kN) of thrust dry; afterburning variants can reach up to 5,000 lb f (22 kN). The engine, depending upon additional equipment and specific model, weighs from 300 to 500 pounds (140 to 230 kg).

General Electric J85 - Wikipedia

No engine in jet propulsion is quite like GE's tiny J85 turbojet. Originally designed in 1954, the J85 is expected to power U.S. military aircraft until at least 2040. That's not a typo: GE had delivered more than 12,000 J85 engines and its commercial engine variants by the end of its production run in 1988.
