Google allows users to search the Web for images, news, products, video, and other content.

Google

Google App Engine is a Platform as a Service and cloud computing platform for developing and hosting web applications in Google-managed data centers. Applications are sandboxed and run across multiple servers. App Engine offers automatic scaling for web applications—as the number of requests increases for an application, App Engine automatically allocates more resources for the web application to handle the additional demand. Google App Engine primarily supports Go, PHP, Java, Python, Node ...

Google App Engine - Wikipedia

For static pages like the default, Google App Engine appears to cache the results. The dynamic pages like php do not appear to have cache (as expected). I was able to hit another google app engine front end that did not cache the results to test and it worked
