Summary A high-voltage, direct current (HVDC) system (also called a power superhighway or an electrical superhighway) uses direct current for the bulk transmission of electrical power, in contrast with the more common alternating current (AC) systems. For long-distance transmission, HVDC systems may be less expensive and suffer lower electrical losses.

In the true bipolar HVDC transmission system, each direct current DC cable is connected to an independent converter. As shown in Fig. 3, the earth point of the true bipolar HVDC system is set at a single point in each station. In contrast to the pseudo bipolar VSC-HVDC, it exhibits independent control for the positive and negative poles and has the following features , , , :
