Book 1 establishes Aristotle's scientific method. He recommends beginning with our general understanding of the universe ("the things which are more knowable and obvious to us") and proceeding from these general ideas to the specific examination (always shaped by our previous understanding) of specific things, or phenomena ("clearer and more knowable by nature").

In Physics ii 3, Aristotle makes twin claims about this four-causal schema: (i) that citing all four causes is necessary for adequacy in explanation; and (ii) that these four causes are sufficient for adequacy in explanation. Each of these claims requires some elaboration and also some qualification. As for the necessity claim, Aristotle does not suppose that all phenomena admit of all four ...

Potentiality and potency are translations of the Ancient Greek word *dunamis* (δύναμις) as it is used by Aristotle as a concept contrasting with actuality. Its Latin translation is "potentia", root of the English word potential, and used by some scholars instead of the Greek or English variants.. *Dunamis* is an ordinary Greek word for possibility or capability.

Potentiality and actuality - Wikipedia

Aristotle's study of the natural world plays a tremendously important part in his philosophical thought. He was very interested in the phenomena of motion, causation, place and time, and teleology, and his theoretical materials in this area are collected in his *Physics*, a treatise of eight books which has been very influential on later thinkers.
