Quality Control And Reliability Engineering

Quality and reliability engineer is very similar and have quite a bit of overlap. I think of reliability as all of quality yet over time. The quality folks may care about which color to use while the reliability folks ask will it fade, chip, etc over time (will it keep the desired color over time)

What are the differences between reliability engineers and ...

Quality vs. Reliability. Reliability has sometimes been classified as "how quality changes over time." The difference between quality and reliability is that quality shows how well an object performs its proper function, while reliability shows how well this object

Reliability engineering - Wikipedia

The primary role of the Reliability Engineer is to identify and manage asset reliability risks that could adversely affect plant or business operations. This broad primary role can be divided into three smaller, more manageable roles: Loss Elimination, Risk Management and Life Cycle Asset Management (LCAM).

Quality is how well something performs its function. For example, a high speed train that is fast, energy efficient, safe, comfortable and easy to operate might be considered high quality. Reliability is how well something maintains its quality over time as it faces real world conditions. For example, a high speed train that is durable for 20 years and remains safe in high winds and earthquakes.
