When the radiation emitted contains enough energy to strip an electron from an atom that it encounters along its path, the radiation is called ionizing. Radiation which lacks the energy to remove electrons from atoms is called non-ionizing radiation. Common Examples of Ionizing Radiation: X-rays,  $\gamma$ -rays,  $\beta$  particles,  $\alpha$  particles and neutrons

Radiation and radioactive materials are part of our environment. The radiation in the environment comes from both cosmic radiation that originates in outer space, and from radioactive materials that occur naturally in the earth and in our own bodies. Together, these are known as background radiation.
