The Addicted Brain Why We Abuse Drugs, Alcohol, and ...

Heart disease affects the heart. Addiction affects the brain. Both are preventable and treatable, but they can last a lifetime if left alone. Although an addict may make the first choice to take a drug, no one chooses to become addicted. Because drug addiction changes the brain so drastically, it can also drastically change a person's personality.

Neuroscientist Nora Volkow, director of the National Institute on Drug Abuse at the NIH, applies a lens of addiction to the obesity epidemic.

Why do our brains get addicted?

To understand addiction, it's helpful to begin with the brain's elaborate reward system, built around a chemical called dopamine. When we do something that helps us survive, like eating, socializing, or procreating, the brain rewards us with a blast of dopamine across our cerebral circuitry, which we experience as pleasure.
