At the dawn of the twentieth century, David Hilbert challenged the mathematicians of the world with twenty-three problems. These problems encompassed a wide breadth of mathematics and stimulated mathematicians for decades to come. Yandell's book is a (relatively) leisurely stroll through the people and the mathematics associated with these ...

Solving one of Hilbert's problems has been the romantic dream of many a mathematician. Hermann Weyl wrote that by solving one, a mathematician "passed on to the honors class of the mathematical community." In the last hundred years, solutions and significant partial results have come from all over the world.

Hilbert's problems are twenty-three problems in mathematics published by German mathematician David Hilbert in 1900. The problems were all unsolved at the time, and several of them were very influential for 20th-century mathematics. Hilbert presented ten of the problems at the Paris conference of the International Congress of Mathematicians, speaking on August 8 in the Sorbonne. The complete list of 23 problems was published later, most notably in English translation in 1902 by Mary Frances Wins

The Honors Class is the collection of mathematicians that individually or in collaboration solved or partially solved at least one of Hilbert's 23 problems. Yandell does a great of gathering up the historical information so that we have an up-to-date account of the progress on each problem and even how some problems evolved because of their vague or incorrect original proposal.

Yandell has written a charming biography of the problems and the Honors Class. Hilbert had aimed to make his selection comprehensive, and Yandell's book, organized by branch of mathematics rather than by the number of the problem, turns into something like a description of mathematics itself.

Hilbert's eleventh problem is one of David Hilbert's list of open mathematical problems posed at the Second International Congress of Mathematicians in Paris in 1900. A furthering of the theory of quadratic forms, he stated the problem as follows: . Our present knowledge of the theory of quadratic number fields puts us in a position to attack successfully the theory of quadratic forms with any ...
